

# 2021 Data Report for Lake Lancelot, Gladwin County

Site ID: 260104

44.112557°N, 84.460721°W

The CLMP is brought to you by:

**EGLE** MICHIGAN DEPARTMENT OF  
ENVIRONMENT, GREAT LAKES, AND ENERGY

MICHIGAN STATE  
UNIVERSITY

**About this report:**

This report is a summary of the data that have been collected through the Cooperative Lakes Monitoring Program. The contents have been customized for your lake. The first page is a summary of the Trophic Status Indicators of your lake (Secchi Disk Transparency, Chlorophyll-a, Spring Total Phosphorus, and Summer Total Phosphorus). Where data are available, they have been summarized for the most recent field season, five years prior to the most recent field season, and since the first year your lake has been enrolled in the program.

If you did not take 8 or more Secchi disk measurements or 4 or more chlorophyll measurements, there will not be summary data calculated for these parameters. These numbers of measurements are required to ensure that the results are indicative of overall summer conditions.

If you enrolled in Dissolved Oxygen/Temperature, the summary page will have a graph of one of the profiles taken during the late summer (typically August or September). If your lake stratifies, we will use a graph showing the earliest time of stratification, because identifying the timing of this condition and the depth at which it occurs is typically the most important use of dissolved oxygen measurements.

The back of the summary page will be an explanation of the Trophic Status Index and where your lake fits on that scale.

The rest of the report will be aquatic plant summaries, Score the Shore results, and larger graphs, including all Dissolved Oxygen/Temperature Profiles that you recorded. For Secchi Disk, Chlorophyll, and Phosphorus parameters, you need to have two years of data for a graph to make logical sense. Therefore if this is the first year you have enrolled in the CLMP, you will not receive a graph for these parameters.

Remember that some lakes see a lot of fluctuation in these parameters from year to year. Until you have eight years worth of data, consider all trends to be preliminary.

To learn more about the CLMP monitoring parameters or get definitions to unknown terms, check out the CLMP Manual, found at: [https://micorps.net/wp-content/uploads/2021/03/CLMP-Manual-2019update2\\_2021.pdf](https://micorps.net/wp-content/uploads/2021/03/CLMP-Manual-2019update2_2021.pdf)

**Thank you!**

The CLMP leadership team would like to thank you for all of your efforts over the past year. The CLMP would not exist without dedicated and hardworking volunteers!

The CLMP Leadership Team is made of: Jo Latimore, Erick Elgin, Jean Roth, Tamara Lipsey, Mike Gallagher, Melissa DeSimone, and Paul Steen

**Questions?**

If you have questions on this report or believe that the tabulated data for your lake in this report are in error please contact:

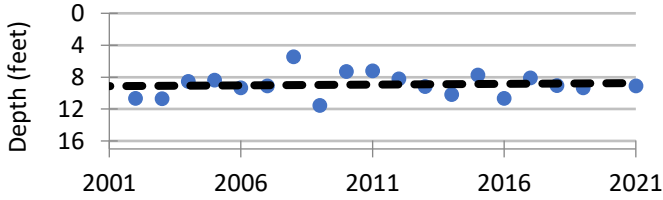

**Paul Steen (psteen@hrwc.org), CLMP Data Analyst**

# Lake Lancelot, Gladwin County 2021 CLMP Results

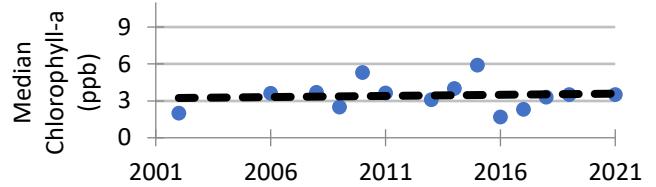

## Secchi Disk Transparency (feet)

Year	# Readings	Min	Max	Avg	Std. Dev	Carlson TSI
2021	9	7.5	10.5	9.1	1.2	45
2016-2019	37	6.5	18.5	9.1	1.6	45
1998-2015	161	2.5	15.0	8.8	2.0	46
2021 All CLMP Lakes	2817	1.0	50.0	12.7	2.9	42

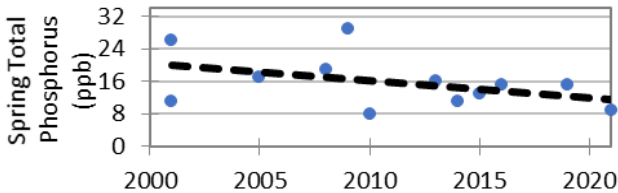

## Chlorophyll-a (parts per billion)

Year	# Samples	Min	Max	Med	Std. Dev	Carlson TSI
2021	5	2.6	7.4	3.5	2.1	43
2016-2019	20	<1.0	7.0	2.8	1.8	41
2002-2015	53	<1.0	11.0	2.8	1.9	43
2021 All CLMP Lakes	635	<1.0	42.0	2.2	3.4	39

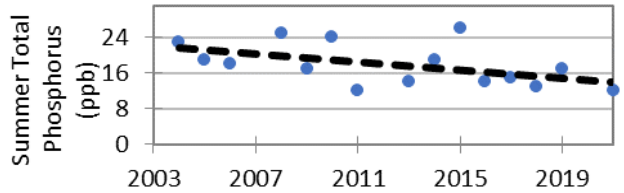

## Spring Phosphorus (parts per billion)

Year	# Samples	Min	Max	Avg	Std. Dev
2021	1	9.0	9.0	9.0	NA
2016-2019	2	15.0	15.0	15.0	0.0
2001-2015	9	8.0	29.0	16.7	7.1
2021 All CLMP Lakes	220	<= 3	100.0	14.9	11.0

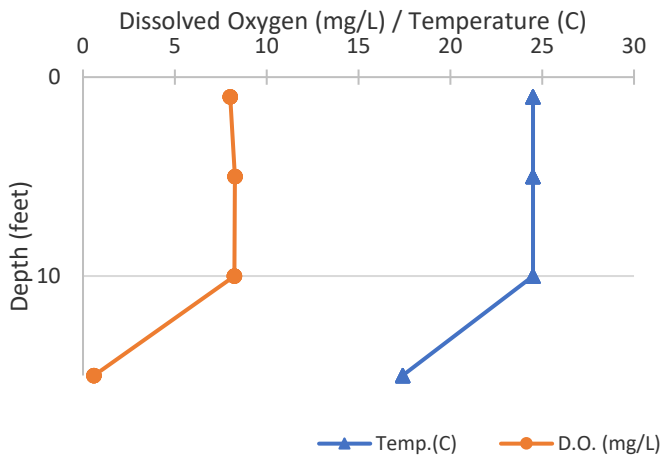

## Summer Phosphorus (parts per billion)

Year	# Samples	Min	Max	Avg	Std. Dev	Carlson TSI
2021	1	12.0	12.0	12.0	NA	40
2016-2019	4	13.0	17.0	14.8	1.7	43
2004-2015	10	12.0	26.0	19.7	4.7	47
2021 All CLMP Lakes	281	<= 3	65.0	12.8	9.3	38

## Dissolved Oxygen and Temperature Profile

6/15/2021

## Summary

Average TSI	2021	2016-2019	1998-2015
Lake Lancelot	43	43	45
All CLMP Lakes	42	40	41

With an average TSI score of 43 based on 2021 Secchi transparency, chlorophyll-a, and summer total phosphorus data, this lake is rated as a mesotrophic lake.

The lake keeps some dissolved oxygen in the bottom waters through spring, but by early summer the lake has stratified and the bottom water is devoid of oxygen.

While the trends for individual parameters are mixed, the overall nutrient levels have decreased slowly in this lake over time.

\* = No sample received W= Value is less than the detection limit (<3 ppb) T= Value reported is less than the reporting limit (5 ppb).  
<1.0 = Chlorophyll-a: Sample value is less than limit of quantification (<1 ppb).

# Trophic Status Index Explained

In 1977, limnologist Dr. Robert Carlson developed a numerical scale (0-100) where the numbers indicate the level of nutrient enrichment. Using the proper equations, we can convert results from Summer Total Phosphorus, Secchi Depth, and Chlorophyll-a to this Trophic Status Index (TSI). The TSI numbers are furthermore grouped into general categories (oligotrophic, mesotrophic, eutrophic, and hypereutrophic), to quickly give us a way to understand the general nutrient level of any lake.

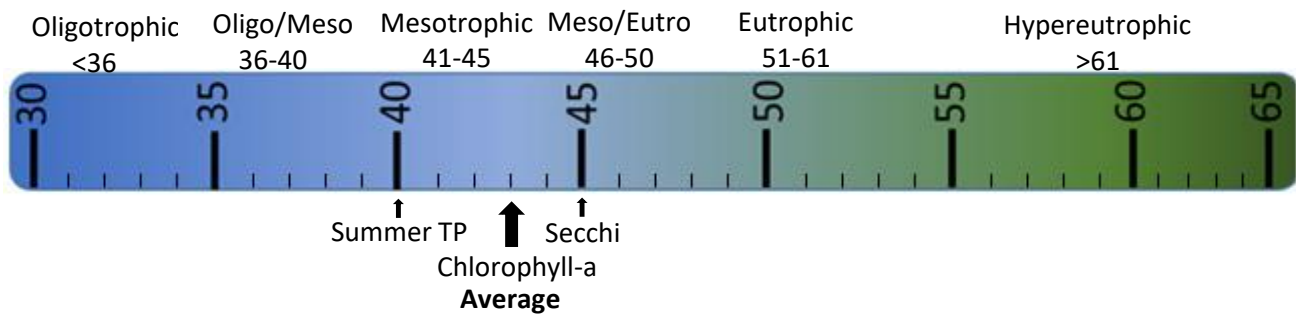

The tables below give the results-to-TSI conversions for the water quality data ranges normally seen in the CLMP. The formulas for this conversion can be found in the CLMP manual (link is on page 2 of this report).

Phosphorus (ppb)	TSI Value
<5	<27
6	30
8	34
10	37
12	40
15	43
18	46
21	48
24	50
32	54

TSI for Lake Lancelot in 2021	
Average	43
Secchi Disk	45
Summer TP	40
Chlorophyll-a	43

**Oligotrophic:** Generally deep and clear lakes with little aquatic plant or algae growth. These lakes maintain sufficient dissolved oxygen in the cool, deep-bottom waters during late summer to support cold water fish, such as trout and whitefish.

**Mesotrophic:** Lakes that fall between oligotrophic and eutrophic. Mid-ranged amounts of nutrients.

**Eutrophic:** Highly productive eutrophic lakes are generally shallow, turbid, and support abundant aquatic plant growth. In deep eutrophic lakes, the cool bottom waters usually contain little or no dissolved oxygen. Therefore, these lakes can only support warm water fish, such as bass and pike.

**Hypereutrophic:** A specialized category of eutrophic lakes. These lakes exhibit extremely high productivity, such as nuisance algae and weed growth.

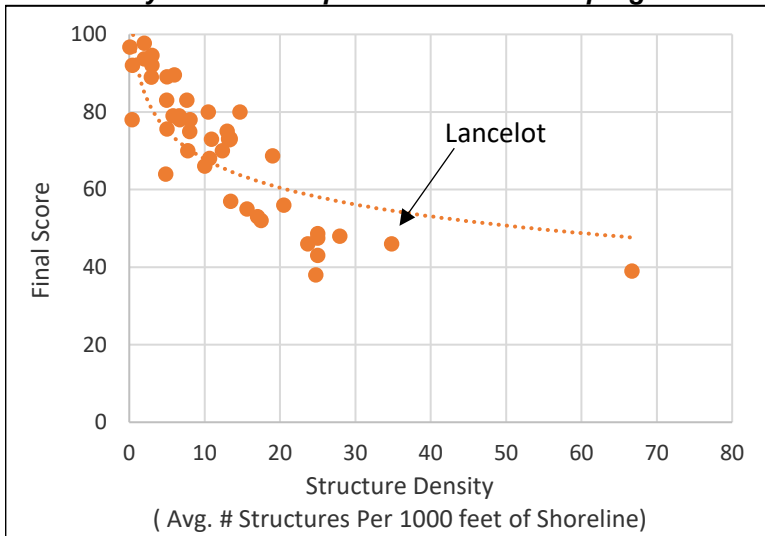

# Lake Lancelot, Gladwin County 2016 Score the Shore Results

The Score the Shore Habitat Assessment was conducted on Lake Lancelot in 2016.

This assessment involves rating 1000 foot sections of shoreline for aquatic vegetation, shoreline vegetation, erosion, and erosion control practices (like sea walls). Each shoreline section is given three scores ranging from 0-100 for the categories of Littoral, Riparian, and Erosion Management. The three scores are averaged to produce a average section score. Then a total score is given to the entire lake by averaging all of the average section scores. A score of 0 indicates a shoreline that has been extremely disturbed by human impacts and no natural shoreline remains. A score of 100 indicates a shoreline that is nearly pristine.

### How does your lake compare to others in the program?

<b>Lake Lancelot:</b>	
Number of Sections:	15
Number of Structures:	522
Structure Density:	34.8
Final Score:	46

<b>All 42 Participating Lakes from 2015-2018:</b>	
Avg. Number of Sections:	16.3
Avg. Number of Structures:	248.5
Avg. Structure Density:	15.2
Avg. Final Score:	70.5

### Analysis specific to Lake Lancelot:

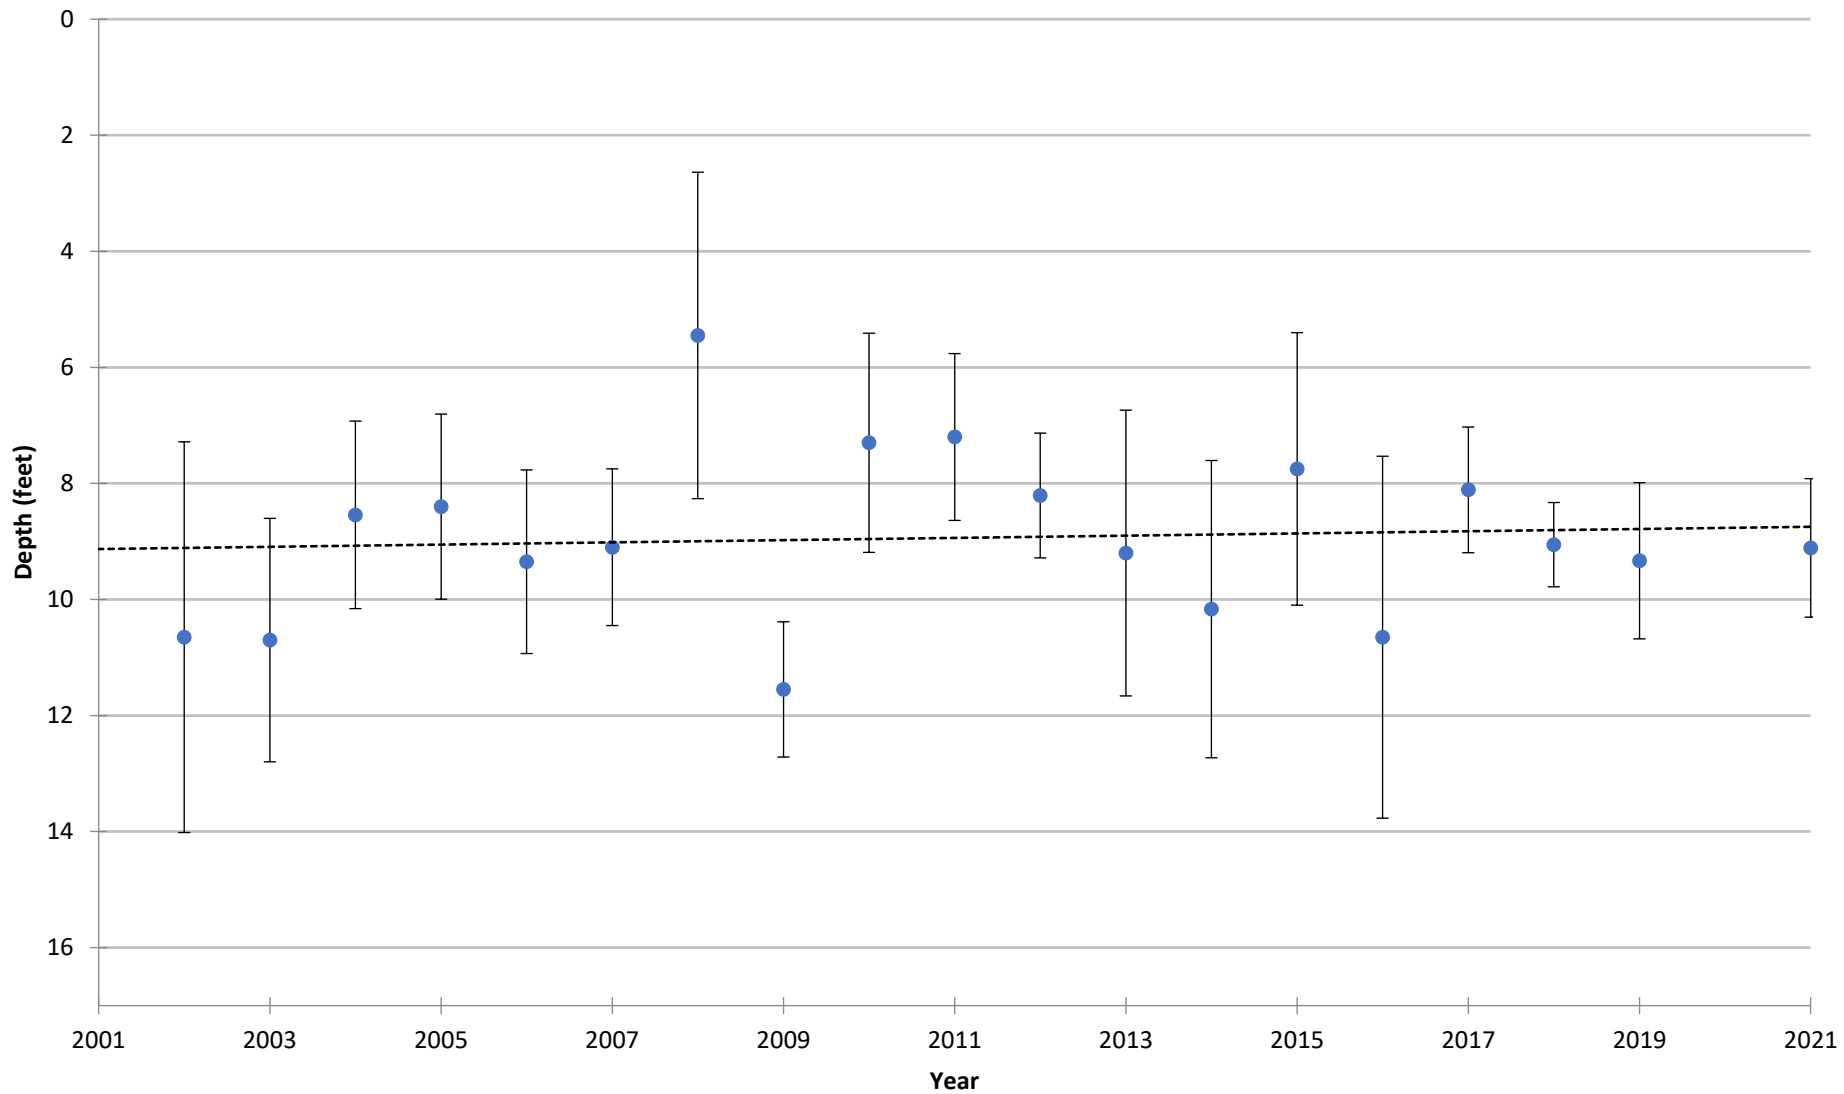

Overall, the lakeshore habitat of Lake Lancelot is below average when compared to the other lakes in the program. The majority of the lake sections score poor or worse (1 highly impacted, 10 poor, 4 fair).

All three of the scoring categories came out approximately the same on Lancelot (Average scores: Littoral 43, Riparian 44, Erosion Control 52) This means that there is no particular strength or weakness to the overall habitat on Lake Lancelot.

To improve scores, residents should work on all three categories. Keep native plants in the shallows, allow unvegetated areas to grow on the shoreline, and remove sea wall whenever possible. In particular, residents should look at section 2 and determine if there would be a way to boost the riparian score here (this section was highly impacted and scored a 0 for the riparian category).
