# Pecks Lake, Osceola County 2022 Exotic Aquatic Plant Watch Results

The Exotic Aquatic Plant Watch was conducted on Pecks Lake in 2022.

This survey involves sampling at multiple locations around the lake to detect new invaders, and document the extent of known invaders. While notes on other plant species may be recorded during the survey, the effort focuses on five highly invasive species: Eurasian watermilfoil (*Myriophyllum spicatum*), starry stonewort (*Nitellopsis obtusa*), curly-leaf pondweed (*Potamogeton crispus*), European Frogbit (*Hydrocharis morsus-ranae*), and Hydrilla (*Hydrilla verticillata*).

The table below summarizes the results of the 2022 Exotic Aquatic Plant Watch on Pecks Lake.

---

Pecks Lake, Osceola County		
2022 Exotic Aquatic Plant Watch Results		
Survey Date(s): July 7, August 19, September 9		
<u>Species</u>	<u>Status</u>	<u>Comments</u>
Eurasian watermilfoil	FOUND	Found in the one site reportedly surveyed. No photos submitted for confirmation.
Starry stonewort	not found	
Curly-leaf pondweed	not found	*Also collected a sample of a plant that could be parrotfeather; will submit to MiCorps staff for review in spring 2023.
European Frogbit	not found	
Hydrilla	not found	

---

Visit the MiCorps Data Exchange (<https://micorps.net>) or contact the lead volunteer on your lake for more details on the survey, including sampling locations, maps, and abundance information, and for information on past surveys.
