

Michigan's Citizen Volunteer Partnership for Lakes

2022 Annual Summary

Managed By:

Michigan Department of Environment, Great Lakes, and Energy
Michigan State University
Michigan Lakes and Streams Association, Inc.
Huron River Watershed Council

I. Introduction	3
II. Map of 2022 CLMP Participating Lakes	4
III. A Note About Trophic Status and Carlson's TSI	5
IV. Summary Statistics of Monitored Parameters	6
V. Thank you, CLMP Volunteers!	g
VI. Thank You Sample Collection Center Staff!	18
VII. CLMP Contacts	18

I. Introduction

The Michigan Department of Environment, Great Lakes, and Energy (EGLE), Michigan State University Extension, Michigan Lakes and Streams Association, and the Huron River Watershed Council partner to implement the MiCorps Cooperative Lakes Monitoring Program (CLMP).

This report summarizes the 2022 CLMP field season.

The goals of the CLMP are to:

- Provide baseline information and document trends in water quality for individual lakes.
- Educate lake residents, users, and interested citizens in the collection of water quality data, lake ecology, and lake management practices.
- Build a constituency of citizens to practice sound lake management at the local level and to build public support for lake quality protection.
- Provide a cost-effective process for EGLE to increase baseline data for lakes state-wide.

To learn more about the CLMP program, there are many other resources available:

- 1. The Michigan Clean Water Corps website includes a variety of resources such as the online database which contains all CLMP data. https://data.micorps.net/view/lake/
- 2. The CLMP Manual contains an overview of the program and the volunteer monitoring procedures: https://micorps.net/wp-content/uploads/2021/03/CLMP-Manual-2019update2 2021.pdf
- 3. Starting in 2014, each lake enrolling in the program received an individual report summarizing their data. https://micorps.net/lake-monitoring/individual-lake-reports/
- 4. The CLMP Quality Assurance Project Plan (QAPP) is a detailed report on how the CLMP collects and maintains high quality scientific data: https://micorps.net/wp-content/uploads/2018/06/QAPP CLMP 2018.pdf

II. Map of 2022 CLMP Participating Lakes

III. A Note About Trophic Status and Carlson's TSI

A Trophic Status Index (TSI) is a lake classification system that rates water bodies on the amount of biological production they sustain. The CLMP uses the TSI scheme developed in 1977 by limnologist Dr. Robert Carlson, who created a numerical scale (0-100) where the numbers indicate the level of nutrient enrichment. Using the proper equations, the CLMP convert results from Summer Total Phosphorus, Secchi Depth, and Chlorophyll-a to this TSI scale.

There are 3 primary categories of Trophic Status:

Oligotrophic: Generally deep and clear lakes with little aquatic plant or algae growth. These lakes maintain sufficient dissolved oxygen in the cool, deep-bottom waters during late summer to support cold water fish, such as trout and whitefish. Carlson TSI score: Equal to or less than 38.

Eutrophic: Highly productive eutrophic lakes are generally shallow, turbid, and support abundant aquatic plant growth. In deep eutrophic lakes, the cool bottom waters usually contain little or no dissolved oxygen. Therefore, these lakes can only support warm water fish, such as bass and pike. Carlson TSI Score: Greater than 48.

• Hypereutrophic: A specialized category of eutrophic lakes. These lakes exhibit extremely high productivity, such as nuisance algae and weed growth. Carlson TSI Score: Greater than 61.

IV. Summary Statistics of Monitored Parameters

A. General Statistics

2022 General Statistics		
No. of sites enrolled in at least one parameter	295	
Number of sites meeting participation criteria for at least one parameter	260 (88%)	
Number of sites with full participation in all three parameters measuring trophic status (Secchi Disk, Summer Total Phosphorus, Chlorophyll-a):	115 (39%)	
Average TSI of those sites with full trophic participation	42.7 (Mesotrophic rating)	

B. Secchi Disk Transparency

CLMP volunteers measure water transparency using a Secchi disk from late spring to the end of the summer. Ideally, 18 weekly measurements are made from mid-May through mid-September. Participation involves submitting at least 8 measurements.

2022 Secchi Disk Transparency		
No. of sites enrolled	275	
No. of sites meeting participation criteria	191 (69%)	
Total no. of measurements reported	2726	
Lake with lowest average transparency (in ft)	1.0 (Fox Lake, Muskegon, Co.)	
Lake with highest average transparency (in ft)	35.1 (Bear Lake, Kalkaska Co.)	
Mean (average) measurement of all lakes (in ft)	11.3	
Mean (average) TSI of all lakes	43.6 (Mesotrophic rating)	

C. Total Phosphorus

CLMP volunteers collect water samples for total phosphorus during spring overturn, when the lake is generally well mixed from top to bottom, and during late summer, when the lake is at maximum temperature stratification from the surface to the bottom.

2022 Total Phosphorus Monitoring			
Spring Overturn Sampling			
No. of sites enrolled	199		
No. of sites submitting valid samples	174 (87%)		
Minimum reported value	< 5 μg/L (Little Twin, Kalkaska Co and First Fortune, Iron Co)		

Maximum reported value 220 μg/L (Crockery Lake,

Ottawa Co) 20.5 µg/L

Summer Stratification Sampling

Mean (average) value

No. of sites enrolled 257

No. of sites submitting valid samples 232 (90%)

Minimum reported value < 5 μg/L (multiple lakes)

Maximum reported value 150 μg/L (Fox Lake, Muskegon

Co)

Mean (average) value 17.4 μg/L

Mean (average) TSI 42.7 (Mesotrophic)

D. Chlorophyll-a

Volunteers collect water samples for chlorophyll-a, an estimator of the amount of algae in the water column, once per month from May through September. At least four valid samples must be submitted to be considered full participation in this parameter.

2022 Chlorophyll-a Monitoring		
No. of sites enrolled	161	
No. of sites meeting full participation	143 (89%)	
Total no. of valid samples	622	
Minimum median measurement	< 1 μg/L (multiple lakes)	
Maximum median measurement	43 μg/L (Lost Lake, Oakland)	
Median Lake measurement	4.8 µg/L	
Mean (average) TSI	43.3 (Mesotrophic)	

E. Dissolved Oxygen and Temperature

CLMP volunteers measure dissolved oxygen and temperature profiles for their lakes, measured from the surface to within 3 feet of the bottom, at the deepest point in the lake. These profile measurements are made with an electronic dissolved oxygen meter (YSI Pro20 or YSI 550A), ideally every two weeks from mid-May through mid-September.

2022 Dissolved Oxygen and Temperature Monitoring		
No. of sites enrolled	95	
No. of sites submitting at least one profile	77 (81%)	
Total no. of profiles submitted	611	

F. Exotic Aquatic Plant Watch

Volunteers in this monitoring program survey their lakes for invasive aquatic plants of special concern for Michigan lakes: curly-leaf pondweed, Eurasian watermilfoil, Hydrilla, starry stonewort, and European frog-bit.

2022 Exotic Aquatic Plant Watch		
No. of sites enrolled	63	
No. of sites submitting report	49 (78%)	
No. of lakes reporting Eurasian water milfoil:	22 (44%)	
No. of lakes reporting curly-leaf pondweed:	8 (16%)	
No. of lakes reporting Hydrilla:	0 (0%)	
No. of lakes reporting starry stonewort:	9 (18%)	
No. of lakes reporting European frog-bit:	0 (0%)	

D. Aquatic Plant Identification and Mapping

This program is the most labor-intensive volunteer activity within the CLMP. Typically, a team of volunteers from each enrolled lake is involved, with assistance from a MiCorps biologist. The end result is a plant distribution map and abundance report for all plants growing in the lake, including both native and, if found, invasive species.

2022 Aquatic Plant Mapping		
No. of sites enrolled	11	
No. of sites submitting report	11 (100%)	
	·	

G. Score the Shore

Volunteers motor around their lake, reviewing 1000-foot sections of shoreline for littoral habitat, riparian habitat, and erosion control. Sections with natural habitat will have higher scores than ones with hardened shorelines. Each lake is scored on a 0-100 scale, with 100 having the highest quality habitat. Scores for each section as well as for the entire lake allow volunteers to review high quality areas as well as sections that would benefit from habitat enhancement.

2022 Score the Shore			
No. of sites enrolled 20			
No. of sites submitting report	15 (75%)		
Total No. of lake sections scored 244			
Avg Score	77.6		

V. Thank you, CLMP Volunteers!

VI. Thank You Sample Collection Center Staff!

These individuals help with the logistics of collecting samples, mailing them to Lansing, and distributing and collecting Dissolved Oxygen meters.

Amber Butterfield (Dickenson County Conservation District)
Jeff Pytlarz (Lando Center)
Jean and Jim Roth (Michigan Lakes and Streams Association)

The following EGLE staff:

Jack Cotrone
Kathy David
Sonya Hudson
Tamara Lipsey
Deana Mercs
Amy Nevison
Lucy Robinson
Stevie Swanson
Crystal Zielinski

VII. CLMP Contacts

If you have any questions about the CLMP, please contact Erick Elgin with Michigan State University Extension at elgineri@msu.edu, and <u>subscribe to our email</u> <u>list</u> to receive announcements and updates on these monitoring programs.
