# Fremont Lake, Newaygo County

Site ID: 620029

# 43.4506°N, 85.9647°W

The CLMP is brought to you by:

#### About this report:

This report is a summary of the data that have been collected through the Cooperative Lakes Monitoring Program. The contents have been customized for your lake. The first page is a summary of the Trophic Status Indicators of your lake (Secchi Disk Transparency, Chlorophyll-a, Spring Total Phosphorus, and Summer Total Phosphorus). Where data are available, they have been summarized for the most recent field season, five years prior to the most recent field season, and since the first year your lake has been enrolled in the program.

If you did not take 8 or more Secchi disk measurements or 4 or more chlorophyll measurements, there will not be summary data calculated for these parameters. These numbers of measurements are required to ensure that the results are indicative of overall summer conditions.

If you enrolled in Dissolved Oxygen/Temperature, the summary page will have a graph of one of the profiles taken during the late summer (typically August or September). If your lake stratifies, we will use a graph showing the earliest time of stratification, because identifying the timing of this condition and the depth at which it occurs is typically the most important use of dissolved oxygen measurements.

The back of the summary page will be an explanation of the Trophic Status Index and where your lake fits on that scale.

The rest of the report will be aquatic plant summaries, Score the Shore results, and larger graphs, including all Dissolved Oxygen/Temperature Profiles that you recorded. For Secchi Disk, Chlorophyll, and Phosphorus parameters, you need to have two years of data for a graph to make logical sense. Therefore if this is the first year you have enrolled in the CLMP, you will not receive a graph for these parameters.

Remember that some lakes see a lot of fluctuation in these parameters from year to year. Until you have eight years worth of data, consider all trends to be preliminary.

To learn more about the CLMP monitoring parameters or get definitions to unknown terms, check out the CLMP Manual, found at: https://micorps.net/wp-content/uploads/2021/03/CLMP-Manual-2019update2\_2021.pdf

#### Thank you!

The CLMP leadership team would like to thank you for all of your efforts over the past year. The CLMP would not exist without dedicated and hardworking volunteers!

The CLMP Leadership Team is made of: Jo Latimore, Erick Elgin, Jean Roth, Tamara Lipsey, Mike Gallagher, Melissa DeSimone, and Paul Steen

#### **Questions?**

If you have questions on this report or believe that the tabulated data for your lake in this report are in error please contact:

Paul Steen (psteen@hrwc.org), CLMP Data Analyst

#### Summary

8/16/2022

Average TSI	2023	2018-2022	1975-2017
Fremont Lake	40	42	44
Lakes	44	41	42

With an average TSI score of 40 based on 2023 summer total phosphorus and chlorophyll data, this lake is rated between the oligotrophic and mesotrophic lake classification.

The lake keeps some dissolved oxygen in the bottom waters through early summer, but by mid-summer the lake has stratified and the bottom water is devoid of oxygen.

Long term trends indicate that the trophic status parameters have not changed beyond minor year-to year variation since monitoring began.

\* = Minimum # samples not met for average/median/TSI value

<1.0 = Chlorophyll-a: Sample value is less than limit of quantification (<1 ppb).

W= Value is less than the detection limit (<3 ppb) T = Value reported is less than the reporting limit (5 ppb)

## **Trophic Status Index Explained**

In 1977, limnologist Dr. Robert Carlson developed a numerical scale (0-100) where the numbers indicate the level of nutrient enrichment. Using the proper equations, we can convert results from Summer Total Phosphorus, Secchi Depth, and Chlorophyll-a to this Trophic Status Index (TSI). The TSI numbers are furthermore grouped into general categories (oligotrophic, mesotrophic, eutrophic, and hypereutrophic), to quickly give us a way to understand the general nutrient level of any lake.

The tables below give the results-to-TSI conversions for the water quality data ranges normally seen in the CLMP. The formulas for this conversion can be found in the CLMP manual (link is on page 2 of this report).

Phosphorus			Secchi De	pth		Chlo	rophyll-a		
(ppb)	TSI Value			(ft)	<b>TSI</b> Value		(ppb)	TSI Val	ue

^ Total Phosphorus

^ Chlorophyll-a

**Oligotrophic:** Generally deep and clear lakes with little aquatic plant or algae growth. These lakes maintain sufficient dissolved oxygen in the cool, deep-bottom waters during late summer to support cold water fish, such as trout and whitefish.

Mesotrophic: Lakes that fall between oligotrophic and eutrophic. Mid-ranged amounts of nutrients.

**Eutrophic:** Highly productive eutrophic lakes are generally shallow, turbid, and support abundant aquatic plant growth. In deep eutrophic lakes, the cool bottom waters usually contain little or no dissolved oxygen. Therefore, these lakes can only support warm water fish, such as bass and pike.

**Hypereutrophic:** A specialized category of euthrophic lakes. These lakes exhibit extremely high productivity, such as nuisance algae and weed growth.

## Fremont Lake, Newaygo County **2016 Exotic Aquatic Plant Watch Results**

The Exotic Aquatic Plant Watch was conducted on Fremont Lake in 2016.

This survey involves sampling at multiple locations around the lake to detect new invaders, and document the extent of known invaders. While notes on other plant species may be recorded during the survey, the effort focuses on four highly invasive species: Eurasian watermilfoil (Myriophyllum spicatum), starry stonewort (Nitellopsis obtusa), curly-leaf pondweed (Potamogeton crispus), and Hydrilla (Hydrilla verticillata).

The table below summarizes the results of the 2016 Exotic Aquatic Plant Watch on Fremont Lake.

#### Fremont Lake, Newaygo County

#### **2016 Exotic Aquatic Plant Watch Results**

Survey Date: May 16, 2016				
<u>Species</u> Eurasian watermilfoil	<u>Status</u> FOUND	<b><u>Comments</u></b> Lakewide density = 2.1 (scale 0-5; at 19 of 77 surveyed sites); 3rd most common plant in lake		
Starry stonewort	not found			
Curly-leaf pondweed	FOUND	Lakewide density = 1.6; relatively uncommon. Found 8 of 77 surveyed sites.		
Hydrilla	not found			

#### N/-40 2040

Visit the MiCorps Data Exchange (www.micorps.net) or contact the lead volunteer on your lake for more details on the survey, including sampling locations, maps, and abundance information, and for information on past surveys.

### Fremont Lake, Newaygo County 2016 CLMP Aquatic Plant Results

The Aquatic Plant Identification and Mapping survey was conducted on Fremont in 2016.

This survey involves intensive sampling at multiple locations and depths around the lake produce a complete map of all aquatic plants present in a lake. A great deal of effort is involved both on the lake and back on shore to identify plants, compile data, and develop a detailed plant map, but the result is an extremely valuable record of the plant community of the lake.

Aquatic plants were sampled from a total of 77 locations in Fremont Lake in 2016. Below is a list of species reported [in order of relative abundance, if the volunteer calculated that like they are supposed to].

Fremont Lake, Newaygo County 2016 Aquatic Plant Identification and Mapping: Species Reported				
Common Name	<u>Latin Name</u>	<b>Relative Density Rating</b>		
Filamentous algae		2.9		
Coontail	Ceratophyllum demersum	2.5		
Eurasian watermilfoil	Myriophyllum spicatum	2.1		
Waterweed	Elodea canadensis	1.8		
Milfoil	Myriophyllum spp.	1.8		
Muskgrass	Chara spp.	1.8		
Northern watermilfoil	Myriophyllum sibiricum	1.6		
Curly-leaf pondweed	Potamogeton crispus	1.6		
Bushy pondweed	<i>Najas</i> spp.	1.4		
Sago pondweed	Stuckenia pectinata	1.1		
Pondweed species	Potamogeton spp.	1.0		
Water stargrass	Heterantha (Zosterella) dubi	a 1.0		

Visit the MiCorps Data Exchange (www.micorps.net) or contact the lead volunteer on your lake for more details on the survey, including sampling locations, maps, and abundance information, and for information on past surveys.

# Fremont Lake, Newaygo County 2016 Score the Shore Results

248.5

15.2

70.5

The Score the Shore Habitat Assessment was conducted on Fremont Lake in 2016.

This assessment involves rating 1000 foot sections of shoreline for aquatic vegetation, shoreline vegetation, erosion, and erosion control practices (like sea walls). Each shoreline section is given three scores ranging from 0-100 for the categories of Littoral, Riparian, and Erosion Management. The three scores are averaged to produce a average section score. Then a total score is given to the entire lake by averaging all of the average section scores. A score of 0 indicates a shoreline that has been extremely disturbed by human impacts and no natural shoreline remains. A score of 100 indicates a shoreline that is nearly pristine.

How does your lake compare to others in the program?

#### Analysis specific to Fremont Lake:

Overall, the lakeshore habitat of Fremont Lake is below average when compared to the other lakes in the program. 50% percent of the lake sections score poor or worse (1 highly impacted, 12 poor, 5 fair, 7 good).

With an average score of 73.6, the lake sections scored highest in erosion control out of the 3 main categories, meaning that there only a moderate amount of sea walls and other shoreline erosion structures.

With an average score of 39.5, the poorest scoring category was the littoral zone. To improve the littoral zone score, leave woody debris in place and allow native aquatic vegetation to grow in the shallow waters. The worst scoring section of the lake was section 22, which scored badly in all three categories, but in particular scored a 0 in riparian zone, meaning that there was no unmowed vegetation on this section.
